

SK Abrasives LIGHT FINISH DEBURRING WHEEL

Precision Finishing With Peace-Of-Mind

It is a known fact that the task of polishing, deburring and cleaning can inevitably damage or alter the surface and dimension of precision engineered components and instruments. So how do we polish or refine the surfaces of these delicately designed components and instruments without causing damage?

In instances where minute abrasive adjustments need to be done to ensure the geometry of the surface is not altered, our Light Finish Deburring Wheels can be utilized with confidence and peace-of-mind. SK Abrasives Light Deburring Wheels are made of light abrasive components ideal for deburring sensitive surfaces.

Recommended Usage & Application

Deburring and polishing of surface areas where the delicate geometry of a component or instrument must not be compromised. Ideal for use and application in finishing precision engineered items such as automotive parts, mechanical parts, jewellery or medical equipment.

SK Abrasives LIGHT FINISH DEBURRING WHEEL

Stock Code	Description	Grade	MOS
